

AI Chat Assistant — Monthly Running Cost

Instagram · WhatsApp · Facebook — automated lead capture & reply

Your enquiries on Instagram, WhatsApp and Facebook are answered automatically by an AI assistant that chats with each customer, collects their trip details, and saves every lead for your team. Below is a realistic estimate of what the **AI running cost** works out to — based on **15 days of real, measured usage**, not a guess.

WHAT WE ACTUALLY MEASURED

1,712	₹77	₹0.31
customer messages handled	total AI cost (15 days)	cost per complete lead

That is roughly **₹0.045 per message** (about 4–5 paise) and **₹0.31 per fully captured lead** (about 31 paise). In simple terms: it costs well under **₹1 to fully handle a customer** from first hello to a saved lead.

ESTIMATED MONTHLY COST BY LEAD VOLUME

Leads per month	Messages handled (approx.)	Estimated AI cost / month
500	~3,500	~₹155
1,000	~7,000	~₹315
2,500	~17,500	~₹785
5,000	~35,000	~₹1,565
10,000	~70,000	~₹3,130
20,000	~140,000	~₹6,260

Bottom line: the AI cost is very small and grows predictably with how many customers you get. Even at a high **10,000 leads a month**, the AI runs for about **₹3,000/month** — a few rupees per lead. A monthly spending cap is set, so the cost can never run over budget, and the system is configured to stay fast even during peak-hour message rushes.

What this covers: this is the **AI language-processing cost only** (the "brain" that reads and replies to messages). Platform & messaging charges (WhatsApp / Meta), automation hosting, and the chat-tool subscription are separate line items and are quoted on their own.

Figures are converted at approximately **₹85 = \$1** and rounded; actual amounts vary slightly with usage and exchange rate.
